

# SNO BARRICADE™

*raising the bar in snow retention*

**FOR METAL ROOF SYSTEMS**

**CLAMPS TO  
STANDING SEAM**  
DOES NOT PIERCE  
OR PENETRATE

1" Bar Clamp-On Standard Model For Standing Seam Shown.

## BARRICADE PLATE

The Barricade Plate is an optional item that is available in color to match or mill finished material. Once properly installed, the Barricade Plate holds the smaller amounts of ice and snow that could pass beneath the bar and available in standard or custom widths. The Barricade Plate is installed on the upslope side of the bar. A tek screw (not visible from the ground) holds the Barricade Plate in place.

- ◆ **Easy-to-Install**
- ◆ **Compatible With Almost All Standing Seam Profiles**
- ◆ **Available In Any Standard Or Custom Pre-Finished Color**
- ◆ **Extremely Powerful Snow-Stopping Application**
- ◆ **Durable & Economical**
- ◆ **Aesthetically Pleasing**

The holding power of the Sno Barricade Clamp-On Snow Guard System comes from the innovative Gem Clamp - an engineered functional form. Its unique design creates an efficient, snow-stopping profile.

Easy to install, the Sno Barricade Clamp-On Snow Guard System is designed for new or existing standing seam metal roof systems. The system is compatible with almost all standing seam profiles. Inside the Gem Clamp is a compression button crimper that grips tight, yet there is no penetration of the standing seam. Original manufacturer integrity is maintained.

Both major components of the Sno Barricade Clamp-On Snow Guard System - the Gem Clamp and the Barricade Plate - are available in any standard or custom pre-finished color. There are no "raw" edges or unfinished surfaces to damage or disrupt the integrity and aesthetics of the roof.
